What is Phishing?

- Phishing is a cyberattack where criminals impersonate trusted organizations to steal:

Passwords

Banking Details

OTPs

Personal Information

Their goal: Steal your identity or money.

Red Flags

- If you notice these, stop before clicking.
 - ✓ Urgent messages
 - ✓ Unknown sender
 - ✓ Grammar mistakes
 - ✓ Suspicious links
 - ✓ Unexpected attachments
 - ✓ Requests for passwords or OTPs

Fake Website vs Real Website

Real

- HTTPS enabled
- Correct domain name
- Secure lock icon

Fake

- Misspelled domain
- Strange URL
- Pop-ups asking for login details

Always check the URL before entering credentials

Social Engineering

- Hackers don't always hack computers...
- They hack **people**.
- They create:
-  Fear
-  Urgency
-  Rewards
-  Fake authority
- Don't react emotionally—verify first.

Common Phishing Methods

Email Phishing

SMS (Smishing)

Voice Calls (Vishing)

Spear Phishing

Every platform can be used to trick you.

Real-Life Example

Email says:

- "Your bank account has been suspended. Click here to verify."
- You click the link.
- You enter your password.

The attacker now has your credentials.

Stay Safe Online

- ✓ Verify the sender
- ✓ Don't click unknown links
- ✓ Use strong passwords
- ✓ Enable Two-Factor Authentication (2FA)
- ✓ Keep software updated
- ✓ Never share OTPs

Quick Quiz

Which one is safer?

 paypa1-login.com

 paypal.com

Answer: Always verify the official domain before logging in.

Cybersecurity Starts With You

- Think before you click.
- Verify before you trust.
- Protect your digital identity.
